

Flood Warning Kemptville District – Ottawa River

NEWS

05/05/2017

The Ministry of Natural Resources and Forestry's (MNR) Kemptville District Office is advising area residents that a **Flood Warning** continues for the north-eastern reaches of the Ottawa River in the District.

Residents living in the City of Clarence-Rockland, the Town of Hawkesbury, and in the Townships of East Hawkesbury and Champlain should stay away from fast-moving rivers and streams at this time of year and regularly check updated messages about spring weather conditions. Residents who live in an area that has a historic susceptibility to flooding should take appropriate precautions to protect their property, such as ensuring sump pumps are functioning and securing items that may be impacted should water levels rise.

Shorelines along streams and rivers are dangerous at this time of year. MNR advises all residents to keep their children, pets and themselves away from lakeshores and riverbanks.

MNR is closely monitoring spring weather and developing watershed conditions. Further updates will be issued as appropriate.

TECHNICAL INFORMATION

This message is being sent on the basis of information received from the Ministry's Surface Water Monitoring Centre, the Ottawa River Regulation Planning Board, Environment Canada and from other sources of weather information.

Description of Current Conditions

The Ottawa River Regulation Planning Board (ORRPB) indicates that water levels along the main stem of the Ottawa River from Pembroke down to the Montreal area remain very high. With further rainfall forecast (20 to 60 mm) over most of the basin by the end of Saturday, significant increases in levels between Pembroke and the Montreal Region are expected.

Risks:

The cumulative rainfall will exacerbate high levels and flows on the Ottawa River system. Given current forecasts and depending on location, flood levels are expected to peak on Sunday or Monday into Tuesday, May 9th.

Residents and communities located in areas that are flood-prone are cautioned to be prepared for flooding of low lying access roads and structures.

A close watch on local forecasts and conditions is recommended.

Expiry Date:

This message will be in effect until (or updated before): 05/09/2017 12:00 AM.

Terminology: Notification Levels

WATERSHED CONDITIONS STATEMENT – WATER SAFETY: indicates that high flows, melting ice or other factors could be dangerous for such users as boaters, anglers and swimmers but flooding is not expected.

WATERSHED CONDITIONS STATEMENT - FLOOD OUTLOOK: gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high winds or other conditions.

FLOOD WATCH: potential for flooding exists within specific watercourses and municipalities.

FLOOD WARNING: flooding is imminent or occurring within specific watercourses and municipalities.
